

Tiger AirSafety Pre-takeoff Announcement

Ladies and gentlemen,

Your safety is our primary focus. We kindly ask that you remove any headphones, and give the cabin crew the courtesy of your full attention over the next few minutes, even if you do fly often.

Your cabin crew will now take you through the safety procedures and equipment for this 737800 aircraft. The safety instruction card in the seat pocket shows the brace position and contains other vital information on what you should do in the unlikely event of an emergency. Please take the time to look at it before we take off.

Your seat belt must now be fastened low and tight around your hips. To fasten the belt push the two metal ends together until they click. To adjust pull the strap until tight. And to release, lift the metal buckle up like this.

The cabin will be pressurised during the flight, however if oxygen is required, masks like these will automatically drop from the unit above your head. Immediately pull the mask firmly down towards you to start the flow of oxygen. place it over your nose and mouth and secure with the strap.

Continue to breathe normally. Oxygen will flow through the mask even though the bag might not inflate. It is important that you fit your own mask first, before assisting other passengers.

Life jackets are located under your seat. If required you will need to retrieve the life jacket and remove it from the plastic bag. Slip the life jacket over your head, pass the strap around your waist, and clip the 2 ends together. To tighten, pull this strap. Once outside the aircraft inflate the life

jacket by pulling down on these toggles. For further inflation, blow into these mouth pieces. There is a light and a whistle for attracting attention. Infant and spare adult life jackets are carried onboard and will be distributed by your cabin crew if required.

There are 8 emergency exits on our Boeing 737800 aircraft that your crew will now point out. There are 2 doors at the front of the aircraft, 4 exits over the wings and 2 doors at the rear. Please note your nearest exit remembering it could be behind you. In an emergency the exits can be found by following the escape path lighting along the aisle.

When the seat belt sign is illuminated, you must remain seated with your seatbelt tightly fastened.

This is a nonsmoking flight. It is a Federal offence to smoke at any time on board this aircraft. The use of electronic cigarettes is also not permitted. The lavatories are fitted with smoke detectors and alarms.

While on board this aircraft it is a requirement for you to follow all illuminated information signs and crewmember instructions.

It is also recommended that your seatbelt is fastened when seated and at any time requested by your crew.

In preparation for our take off, ensure your seat belt is fastened, your seatback is upright with the armrest down and tray table folded away. Please check that your cabin baggage is securely stowed under the seat in front of you, as the aisle and exits must be completely clear.

Handheld electronic devices are to be held in your hand or stowed in the seat pocket.

Shortly, the cabin lights will be dimmed for takeoff. There is a reading light in the panel above you for your convenience.

It's now time to sit back, relax and enjoy your flight.
